10th March, 2021

Dear Prospective Employer,

I am a recently semi-retired South African teaching academic looking for gainful employment in the field of Machine Learning or Data Science.

Although I currently live in South Africa, I hold a UK passport and would like to obtain a position in England or Wales.

Throughout my career, I have taught across the disciplines of Mathematics and Computer Science with preferences for courses in Numerical Methods, Image Processing, Bioinformatics and Machine Learning. I have supervised many graduate projects and undertaken a variety of contract work.

Although teaching took up most of my time during my academic career I have managed a modest research output details of which can be found in my CV.

I am currently working on the backend of a Covid-19 dashboard using Julia as the programming platform. You can view this dashboard at:
